Outline

- 1 Introduction
 - Networking Basics
 - Channel Characteristics
- 2 Implementation
 - Euler-Maruyama Method
- 3 Demonstration

Introduction

Stochastic differential equations are often used to model the nondeterministic behavior of network channels in computer science.

Networking Basics

A **Channel** is the medium through which a message propagates from sender to receiver.

Channel Characteristics

Euler-Maruyama Method

We approximate the solution by assigning y -values

$w_0 < w_1 < w_2 < \dots < w_n$ at discretized t , given the SDE IVP

$$dy(t) = f(y, t)dt + g(t, y)dB_t \quad (1)$$

$$y(a) = y_a \quad (2)$$

1: **procedure** EULER-MARUYAMA METHOD

2: $w_0 \leftarrow y_0$

3: **for** $i = 0, 1, 2, \dots$ **do**

4: $\Delta t_i \leftarrow t_{i+1} - t_i$

5: $\Delta B_i \leftarrow B_{i+1} - B_i$

6: $w_{i+1} \leftarrow w_i + f(t_i, w_i)(\Delta t_i) + g(t_i, w_i)(\Delta B_i)$

algorithm 1: euler-maruyama method, numerical method for SDE

Demonstration
